Global Conference on the Sustainable Development of Small Island Developing States

Bridgetown, Barbados
25 April-6 May 1994

Distr.
GENERAL

A/CONF.167/4
7 April 1994

ORIGINAL: ENGLISH

Item 9 (b) of the provisional agenda*

CONSIDERATION OF PLANS AND PROGRAMMES TO SUPPORT THE SUSTAINABLE DEVELOPMENT OF SMALL ISLAND DEVELOPING STATES AND THE UTILIZATION OF THEIR MARINE AND COASTAL RESOURCES, WHICH INCLUDES MEETING ESSENTIAL HUMAN NEEDS, MAINTAINING BIODIVERSITY, AND IMPROVING THE QUALITY OF LIFE FOR ISLAND PEOPLE, AS WELL AS MEASURES THAT WILL ENABLE SMALL ISLAND DEVELOPING STATES TO COPE EFFECTIVELY, CREATIVELY AND IN A SUSTAINABLE MANNER WITH ENVIRONMENTAL CHANGES AND TO MITIGATE THE IMPACTS ON AND REDUCE THE THREATS POSED TO MARINE AND COASTAL RESOURCES: CONSIDERATION OF THE DRAFT PROGRAMME OF ACTION FOR THE SUSTAINABLE DEVELOPMENT OF SMALL ISLAND DEVELOPING STATES

Current donor activities in support of sustainable development in small island developing States

Report of the Secretary-General

* A/CONF.167/1.

SUMMARY

The Preparatory Committee for the Global Conference on the Sustainable Development of Small Island Developing States, at its resumed first session (7-11 March 1994), requested the Secretary-General to transmit to the Conference a revised version of the report containing relevant information on donor activities in support of the sustainable development of small island developing States (A/48/36/Add.2, decision 20). The report, which has been prepared in response to that request, provides analytical and quantitative information on current donor activities undertaken during the years 1991 and 1992, both as a whole (paras. 15-18) and according to whether they are funded by bilateral (paras. 19-27) or multilateral (paras. 28-38) donors, including non-governmental organizations. The report also provides information on the nature and sectoral allocation of development assistance to those States (paras. 39-76). In accordance with the request of the Preparatory Committee, the activities covered in the report relate directly to the 14 programme areas of the draft programme of action for the sustainable development of small island developing States. The report can contribute to identifying gaps in the allocation of resources and to prioritizing future activities on the basis of a reassessment of needs, and to that end provides a number of conclusions (paras. 77-82).

A comprehensive inventory of donor activities in support of the sustainable development of small island developing States, which supplements the report, is before the Conference as a background document.

I. INTRODUCTION

A. Background

1. At its resumed first session held at United Nations Headquarters from 7 to 11 March 1994, the Preparatory Committee for the Global Conference on the Sustainable Development of Small Island Developing States had before it a report of the Secretary-General, prepared in consultation with the relevant United Nations agencies and organizations, as well as bilateral, regional and multilateral donor agencies and non-governmental organizations, containing relevant information on current donor activities in support of sustainable development in small island developing States. The Preparatory Committee had requested the Secretariat in preparing the report (see A/48/36, para. 72, decision 11), to link that information to the programme areas contained in the draft programme of action for the sustainable development of small island developing States, 1/ and to pay particular attention to avoiding double-counting of data between agencies, and to ensuring that presentations gave a realistic picture of the current activities of agencies and organizations. In its decision 20, the Preparatory Committee requested the Secretary-General to transmit a revised version of the report to the Conference for its consideration.

2. The request of the Preparatory Committee for a report on donor activities in support of sustainable development in small island developing States indicates that the international community is beginning to focus on the implementation of Agenda 21 2/ with respect to those States. The particular vulnerabilities and constraints to sustainable development faced by small island developing States, acknowledged by the international community at the United Nations Conference on Environment and Development (UNCED) in Rio de Janeiro (see the Rio Declaration on Environment and Development, 3/ Principle 6, and Agenda 21, chap. 17G), are multifaceted and complex and have important implications for the sustainable development of the small island developing States themselves as well as many developed and other developing countries. The problems confronting small island developing States call for the formulation of effective programmes that reflect the priority needs of those States and that are designed to enhance their capacity to develop and implement appropriate policies and measures to support their long-term sustainable development.

3. As the international community seeks to move beyond the Global Conference on the Sustainable Development of Small Island Developing States and to support the process of formulating and implementing long-term sustainable development plans and programmes, it will be helpful to have a clear view of the current level, nature and sectoral allocation of development assistance to small island developing States. The present report attempts to meet that requirement and in so doing provides some indication of the gaps that need to be filled. The

---

Note: The terms "State" and "country" as used in the text and tables of this report also refer, as appropriate, to territories and areas.

material in the report can also be drawn upon in the decision-making process for prioritizing future activities.

B. Structure and methodology of the report

4. The report is divided into three sections. Section I, in addition to providing a brief outline of its genesis, sets out the methodology used in compiling data for the report. Section II contains the main body of the report, which provides an overview of current donor support for sustainable development in small island developing States, as well as a detailed analysis at both the bilateral and multilateral levels. To facilitate the examination of donor activities, multilateral support is further disaggregated into action taken by the United Nations system, action taken by intergovernmental organizations and action taken by non-governmental organizations. Subsection IID highlights some of the major projects undertaken at the bilateral and multilateral levels in the sectors covered by the draft programme of action; where relevant, in order to give a more up-to-date picture of donor support, it also includes information on major activities initiated in 1993, even though those activities are not covered in the report for statistical purposes. Section III contains the conclusions of the report.

5. The text of the report is supplemented by a comprehensive body of tables that provide a detailed statistical breakdown of current support for the sustainable development of the small island developing States in the 14 priority areas of the draft programme of action; statistics are presented at the global level (tables 1-3), the bilateral level (tables 4-7) and the multilateral level (tables 9-12). A table covering bilateral technical cooperation (table 8) is also included, although it was not possible to allocate its data to the 14 programme areas (see para. 10 below). Four additional tables provide some basic indicators as well as current levels of total bilateral and multilateral official development assistance (ODA) to the small island developing States (tables 13-16). In order to preserve the continuity of the report, the tables appear at the end of the text.

6. For the purposes of the report, "current" refers to the 1991-1992 biennium. Initial plans to extend the time period covered by the report to 1993 were abandoned due to the lack of complete data for that year. The report therefore gives a snapshot of donor activities; it does not purport to provide any indication of trends in development assistance for sustainable development in small island developing States. It may be several years before a clear trend in the area emerges, given the time involved in donors and recipients reorienting their development assistance programmes in line with revised priorities.

7. In order to gather the information required for the report at the multilateral level, the Secretariat approached the organizations and agencies of the United Nations system, as well as relevant intergovernmental and non-governmental organizations, inviting them to submit information on their activities in support of sustainable development in small island developing States. To facilitate their work, organizations were provided with a

questionnaire based on the guidelines set out by the Preparatory Committee in the above-mentioned decision. The majority of the organizations that were approached responded to the request of the Secretariat (see annex II) and a considerable amount of data was collected from those sources. Despite follow-up requests, the information collected from non-governmental organizations was not sufficiently comprehensive to be incorporated into the tables. However, where possible, that information has been included in an inventory of activities compiled by the Secretariat, which is before the Conference as a background document. In addition, a brief description of the activities of non-governmental organizations in support of sustainable development in small island developing States, based on the responses received, is given in section IIC below.

8. In the case of bilateral donors, a separate request was made to the Organisation for Economic Cooperation and Development (OECD) to provide data on the current development assistance activities of its member countries in support of sustainable development in small island developing States. The information supplied by OECD was the primary source of data for the activities of bilateral donors. In addition, some information was received directly from donors on their regional development activities in support of sustainable development in small island developing States (see annex II).

9. The Secretariat experienced some difficulty in utilizing the data supplied by OECD. The main reporting system used by the OECD Development Assistance Committee (DAC) to gather data on ODA flows is an aggregate system. Although that system is capable of providing data for both commitments and disbursements, it has not been possible to disaggregate the data among the substantive areas of the draft programme of action in accordance with the guidelines of the Preparatory Committee. OECD was able to provide the Secretariat with data broken down by sector under its Creditor Reporting System (CRS); unfortunately, that data is not available at the level of disbursement but only at the level of commitment. In an effort to ensure a greater comparability of data between bilateral and multilateral activities, the latter being reported by agencies at the level of disbursements, the Secretariat considered converting the commitment data to disbursement data using a correction factor. In view of the difficulty of arriving at an acceptable correction factor, however, the Secretariat did not pursue that option; accordingly, bilateral data contained in the present report refer to commitments only. Those donors that do not utilize the CRS and for whom data was not available from DAC were approached directly by the Secretariat for information on their development assistance programmes.

10. The reporting of the technical cooperation component of bilateral development assistance to small island developing States also presented a problem: not all bilateral donors report technical cooperation under the CRS, the reporting of such assistance being optional. To fill that gap, OECD was able to provide aggregate data from the DAC system showing levels of technical cooperation by donor and by recipient country but was not able to allocate that data to the 14 programme areas of the draft programme of action that form the basis of the present report. In view of its significance and in order to give an indication of the overall magnitude of bilateral development assistance to

small island developing States, a separate table on technical cooperation (table 8) has been included in the report. It must be emphasized that the data contained in that table has not been incorporated into the other tables in the report because of the difficulty just noted and also because the table includes technical cooperation reported by donors under the CRS, thus creating a potential problem of duplication. Based on information supplied by OECD, the level of technical cooperation reported by bilateral donors under the CRS represents 25-30 per cent of the total level of technical cooperation reported to DAC. For the 1991-1992 period, eight donors 4/ reported varying degrees of technical cooperation under CRS.

11. Two other methodological problems were encountered by the Secretariat in preparing the report. First, a number of activities reported by multilateral organizations were cross-sectoral in nature, raising the question of how they should be allocated among the various substantive areas of the programme of action. The Secretariat resolved not to attempt to sever such projects for reporting purposes but rather to allocate them to the area with which they had the strongest overall connection. Second, concerning the request of the Preparatory Committee that information in the report be presented at the subprogramme level, the Secretariat was not in a position to do so because a significant portion of the data received, especially data relating to bilateral activities, was not provided in sufficient detail to allow activities to be allocated to subprogrammes with any degree of accuracy.

12. In accordance with the request of the Preparatory Committee, the Secretariat has made every effort in the time available to collect and analyse data from the widest possible range of sources. As a result, while the present report cannot claim to be exhaustive, it none the less captures and analyses a substantial amount of data from bilateral and multilateral donors on their activities in support of the sustainable development of the small island developing States.

13. As mentioned in paragraph 7 above, the Secretariat has compiled a comprehensive inventory of donor projects covering sustainable development in small island developing States. The inventory has been prepared at the activity level and is based on the data collected by the Secretariat from all bilateral and multilateral sources. Activities listed in the inventory are grouped under the substantive areas set out in the draft programme of action and, where provided by the donor, they include financial data for 1993, as well as for 1991 and 1992. Since it provides more detailed information on particular projects, the inventory should prove to be a useful supplement to the present report and is accordingly before the Conference as a background document.

14. All figures used in both the report and the inventory are expressed in current United States dollars. A list of the small island developing States and territories covered in the report is contained in annex I. A list of the organizations and donor countries which provided information for the preparation of the report is contained in annex II.

II. CURRENT INTERNATIONAL SUPPORT FOR SUSTAINABLE DEVELOPMENT IN SMALL ISLAND DEVELOPING STATES

A. Overview (see tables 1-3)

15. Historically, the small island developing States have been highly dependent on overseas development assistance to finance their social and economic development activities. Although ODA has allowed several small island developing States to maintain high levels of gross domestic investment despite relatively low levels of gross domestic savings and to respond to a number of short-term and emergency socio-economic problems, there is little indication that those States have been successful in overcoming the problems arising from the basic constraints to sustainable development that they face. Those constraints include small size; limited resources; geographic dispersion; isolation from markets; a high susceptibility to natural disasters, the fragility and vulnerability of their ecosystems, the depletion of their non-renewable resources, particularly fresh-water supplies; high internal transport costs and limited inter-island transport services; a shortage of skilled personnel; and a high dependence on foreign capital. Thus, there is still a great need for the small island developing States to focus their development efforts on policies and programmes, such as the 14 substantive areas contained in the draft programme of action, that will contribute to their sustainable development and for which there is a continuing need for external development assistance.

16. Donor assistance either committed to or disbursed in small island developing States in the 14 programme areas stood at $1,615 million in 1991 and $1,142 million in 1992. The total level for the biennium 1991-92 was $2.8 billion (see table 1), about 72.9 per cent of which represented assistance from bilateral donors, with the remaining 27.1 per cent coming from multilateral sources, including United Nations agencies and intergovernmental organizations.

17. Among the bilateral donors, of the 14 programme areas of the draft programme of action national institutions and administrative capacity received the highest level of support (28.9 per cent of total assistance in the years 1991-92), followed by human resource development (25.5 per cent), land resources (17.3 per cent), transport and communications (8.8 per cent) and energy resources (8.3 per cent). Among the multilateral donors, human resource development received the largest share of resources provided by multilateral donors (26.5 per cent), followed by land resources (23.4 per cent) and transport and communications (19.8 per cent). The United Nations system provided 44.1 per cent of the resources provided by multilateral donors and intergovernmental organizations (55.9 per cent). It may be noted that the following eight programme areas each received less than 5 per cent of the financial support from bilateral and/or multilateral sources: climate change and sealevel rise, natural and environmental disasters, management of wastes, coastal and marine resources, freshwater resources, tourism resources, biodiversity resources, science and technology, and regional institutions and technical cooperation.

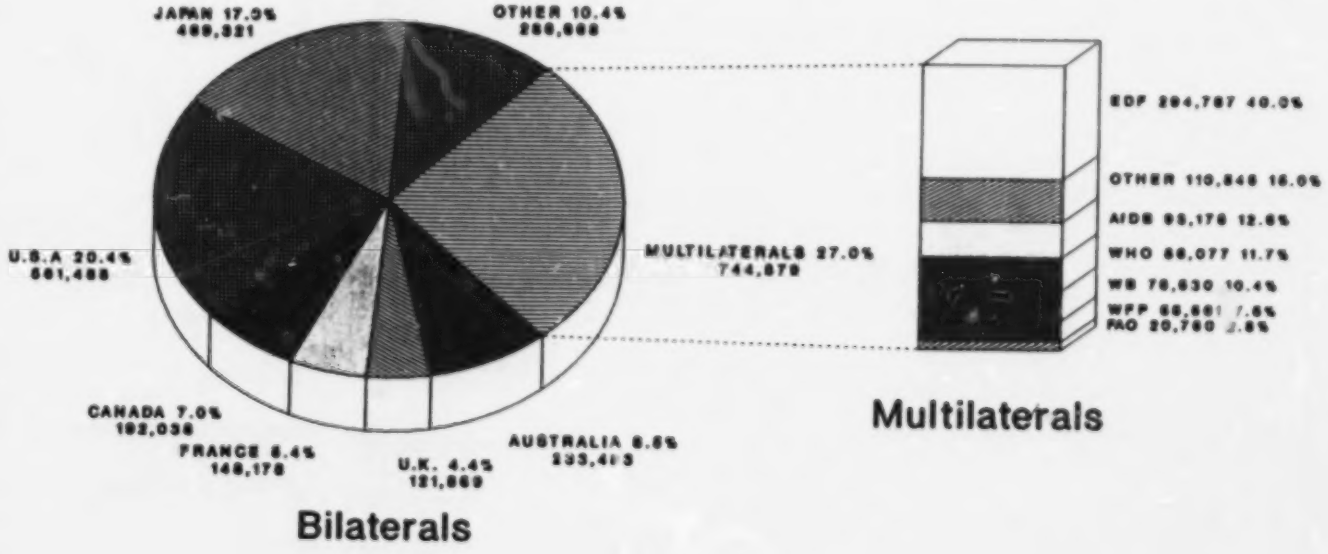
(Thousands of United States dollars)

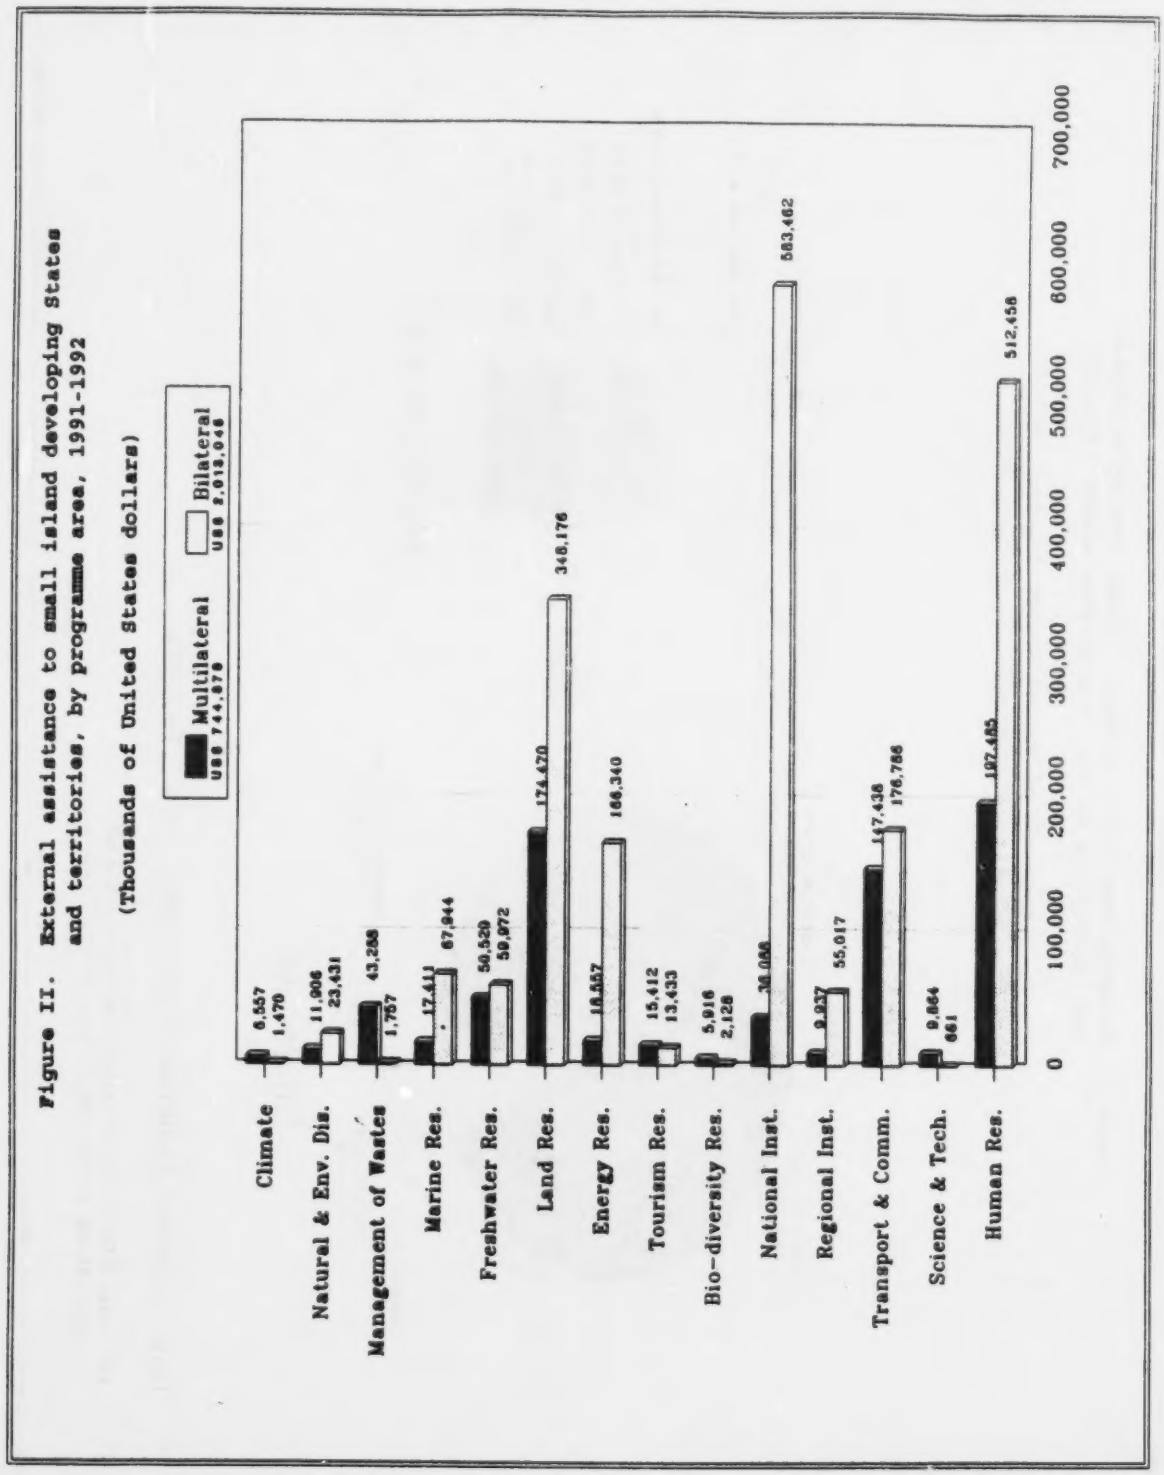


Total External Assistance 1991-1992: US$ 2,757,924

For total ODA to small island developing States, see tables 14 (bilateral) and 15 (multilateral)

Figure II. External assistance to small island developing States and territories, by programme area, 1991-1992

(Thousands of United States dollars)



18. Total assistance from bilateral and multilateral donors among the 14 substantive areas did not vary greatly from region to region. In the regions of Asia and the Pacific, Africa and Latin America and the Caribbean, assistance was allocated mainly to the programme areas of human resource development, land resources, national institutions and administrative capacity, and transport and communications. There was one notable exception: the energy resources area in Latin America and the Caribbean, in which the level of support was 14.1 per cent compared with 6.9 per cent for Africa and 1.8 per cent for Asia and the Pacific.

B. Activity at the bilateral level (see tables 4-8)

19. The total level of bilateral support to the 14 substantive areas of the draft programme of action for the 1991-92 biennium was approximately $2.0 billion (see table 6). 5/ The United States was the single largest donor, contributing about $561 million or 28 per cent of total bilateral assistance for the period. Japan was the next largest donor, contributing 23 per cent of total bilateral assistance, followed by Australia (12 per cent), Canada (10 per cent), France (7 per cent) and the United Kingdom of Great Britain and Northern Ireland (6 per cent). Those six donors together contributed approximately 86 per cent of the total level of bilateral support to the 14 programme areas over the period.

20. In terms of the recipients of bilateral development assistance, the largest beneficiaries were Jamaica ($390 million) and Papua New Guinea ($341 million), the two countries accounting for about 39 per cent of the total level of assistance. The next largest beneficiaries were Haiti (7 per cent), Federated States of Micronesia (6 per cent) and the Marshall Islands (6 per cent). The balance of the funds committed to the 14 programme areas by bilateral donors were divided among 31 small island developing States and territories.

21. The table below highlights the relationship between average levels of per capita assistance from bilateral sources and average gross domestic product (GDP) for the small island developing States and territories covered by the report. Per capita GDP for the six countries in the first column ranged from $1,749 for Cuba to $15,420 for Nauru. A similar range is evident in the second column: $301 for Haiti to $14,598 for Singapore. The third column mainly comprised countries from Asia and the Pacific and Africa; its per capita GDP range extended from $435 (Comoros) to $8,101 (Cyprus). Five of the seven countries in the fourth column were from Latin America and the Caribbean. Antigua and Barbuda had the highest per capita GDP in this group at $6,404 followed by Grenada ($2,309), while Cape Verde had the lowest ($1,079). Nine of the twelve countries in the final column were from Asia and the Pacific, including Kiribati, Tonga, Samoa, Tuvalu, the Marshall Islands and the Federated States of Micronesia. The Seychelles had the highest per capita GDP in that group ($5,447) while Sao Tome and Principe had the lowest ($373). Within each of the five groups in the table there were wide disparities in per capita GDP as well as in per capita assistance received, with countries in the first group receiving no assistance. In addition, there was little correlation between per capita GDP and per capita assistance. On the whole, countries with higher

per capita GDP benefited from higher per capita assistance than countries with lower per capita GDP. The ranges of per capita assistance relative to per capita GDP were:

	$0-.99	$1-50	$51-100	$101-200	$201+
Number of States	6	7	8	7	12
Average per capita assistance	-	14	72	151	539
Average per capita GDP (1991)	2 355 a/	3 039	2 193	1 561	1 665

a/ Per capita GDP was not available for the United States Virgin Islands.

22. Table 4 contains data on the distribution of bilateral development assistance among the 14 programme areas of the draft programme of action. One per feature of the table is the concentration of bilateral donor assistance. Approximately 71 per cent of assistance went to just three programme areas: national institutions and administrative capacity (29 per cent), human resource development (25 per cent), land resources (17 per cent); approximately 88 per cent of assistance went to those three and only two additional areas: transport and communications (9 per cent) and energy (8 per cent). The areas that received the least financial assistance were science and technology, biodiversity resources, management of wastes and climate change, which together received less than 1 per cent of total bilateral assistance in 1991-92. Donors' regional development assistance programmes concentrated on providing support for regional institutions and human resource development.

23. Table 6 indicates the regional distribution of bilateral development assistance to the 14 substantive areas for the 1991-92 biennium. About $821 million, or 44 per cent of the total, was directed to Asia and the Pacific, which accounts for approximately 21 per cent of the total population of the small island developing States covered by the present report. Assistance to the Pacific island countries alone (i.e., excluding Singapore and Maldives) amounted to $797 million, or 43 per cent of the total. The Pacific island countries comprise about 14 per cent of the total population of the small island developing States. The Caribbean island countries, which comprise over 70 per cent of the total population of the small island developing States, received about 43 per cent of total bilateral assistance. The five African small island countries, which comprise about 5 per cent of the population of the small island States, received 10 per cent of total bilateral assistance.

24. As to the regional distribution of assistance to the small island developing States, the data highlights the strong link between donors and particular regions based on geographic proximity. Assistance provided by Australia and New Zealand, for example, was directed almost exclusively to the Pacific island countries. Similarly, over 89 per cent of the assistance provided by Canada and the United Kingdom of Great Britain and Northern Ireland was directed to the Caribbean island countries, while the assistance provided by the United States of America was almost evenly divided between the Pacific and Caribbean regions. Japan's development assistance programme had a broader geographic coverage but nevertheless focused on the Pacific island countries, which received 63 per cent of its assistance as compared with 31 per cent for the Caribbean island countries. France concentrated its support among the African small island countries, which received over 68 per cent of its total support, with the balance being divided between the Caribbean (28 per cent) and Pacific (3 per cent) island countries.

25. Table 8 provides data on the level of technical cooperation directed to small island developing States for the 1991-92 biennium. As noted in paragraph 10 above, the table has been compiled on the basis of data reported under the DAC system and therefore covers all bilateral technical assistance to the small island developing States, not just that which relates to the 14 substantive areas of the draft programme of action.

26. Total technical cooperation for the period was approximately $823 million, comprising $497 million in 1991 and $326 million in 1992. The largest single provider of technical assistance was Australia, which accounted for 24 per cent ($196 million) of the total, followed by the United States of America (22 per cent), France (12 per cent), and Japan (10 per cent). The principal beneficiaries were Papua New Guinea (17 per cent, $144 million), Haiti (11 per cent), Jamaica (9 per cent), Dominican Republic (8 per cent), Cape Verde (7 per cent) and Fiji (6 per cent).

27. As to the regional distribution of technical cooperation to the small island developing States, 47 per cent or $389 million was directed to Asia and the Pacific (42 per cent to the Pacific island countries alone), 31 per cent ($257 million) to the Caribbean island countries, 18 per cent ($147 million) to the five African small island countries, and about 4 per cent ($29 million) to Cyprus and Malta. Australia, New Zealand and Japan directed most of their assistance to Asia and the Pacific. France directed most of its technical assistance to the African small island countries (56 per cent) and to a lesser degree to Asia and the Pacific (23 per cent). The United States of America directed 76 per cent of the technical assistance it provided to the Caribbean island countries, with the balance being divided fairly evenly between Africa, Asia and the Pacific and Europe. The United Kingdom of Great Britain and Northern Ireland directed 51 per cent of its technical assistance to Asia and the Pacific with the Caribbean and African small island countries receiving 30 and 14 per cent of its support respectively.

C. Activity at the multilateral level (see tables 9-12)

28. The total level of support to the 14 substantive areas of the draft action programme provided by the organizations and agencies of the United Nations system (the World Bank, WHO and WFP being the three organizations providing the largest level of assistance) and the intergovernmental organizations, including the European Community, the regional development banks and the Commonwealth Secretariat, was $403.3 million in 1991 and $341.6 million in 1992, or $744.9 million for the biennium. 6/ About 85 per cent of that total was provided to the small island developing States directly, that is, at the national level. Support through regional projects accounted for approximately 13 per cent of resources, with the balance being applied to global activities.

29. The sectoral distribution of multilateral assistance to small island developing States (see table 9) indicates that the major beneficiaries were the substantive areas of human resource development (27 per cent), land resources (23 per cent), transport and communications (20 per cent), freshwater resources (6.7 per cent) and management of wastes (5.8 per cent). As indicated above bilateral assistance to the area of national institutions and administrative capacity was, unlike the case of multilateral assistance, quite limited (4.9 per cent). Multilateral assistance to the remaining eight programme areas was also limited, ranging from 2.5 per cent for activities related to energy resources to less than 1 per cent for activities related to climate and sealevel rise and biodiversity resources.

30. In terms of the volume of assistance by region, Africa received 33.5 per cent of multilateral assistance, Latin America and the Caribbean 29.4 per cent and Asia and the Pacific 25.5 per cent. The relatively higher level of support for the African small island developing States can be attributed to substantial levels of assistance provided by regional development banks, particularly in the two areas of human resource development and transport and communications.

31. An analysis based on per capita development assistance benefit, summarized in the text table below, indicates that four small island developing States or territories, the United States Virgin Islands, Bahrain, Singapore and the Dominican Republic received per capita assistance of less than $1 during the period under review. The average per capita GDP for the group was approximately $4,818. The largest grouping in the table of small island developing States (22), which received average per capita assistance of $10, have per capita GDP ranging from $301 (Haiti) to $15,420 (Nauru). Eight small island developing States with an average per capita GDP of $4,688 received average per capita assistance of $66. Sao Tome and Principe, Kiribati, Grenada and Dominica, with average per capita GDP of $1,306, received average per capita assistance of $153. Seychelles, Cape Verde and Tuvalu with average per capita GDP of $1,725, received the largest per capita multilateral development

assistance: $265. Ranges of per capita development assistance relative to per capita GDP were:

	$0-.99	$1-50	$51-100	$101-200	$201-600
Number of States	4	22	8	4	3
Average per capita assistance	-	10	66	153	265
Average per capita GDP (1991)	4 818 a/	1 561	4 688	1 306	1 725

a/ Per capita GDP for the United States Virgin Islands was not available.

1. Action taken by the United Nations system

32. Organizations of the United Nations system provided 35.3 per cent of total multilateral assistance to small island developing States in 1991 ($142.5 million) and 54.6 per cent in 1992 ($186.4 million) (see table 1). United Nations support in the three regions where the majority of the small island developing States are primarily located was concentrated in Latin America and the Caribbean (38.4 per cent), Asia and the Pacific (28.1 per cent) and Africa (25.6 per cent). Human resource development received the highest level of assistance (36 per cent), followed by land resources (21.2 per cent), freshwater resources (9.7 per cent), management of wastes (9.3 per cent) and transport and communications (8.9 per cent). Some organizations within the United Nations system concentrated their activities in particular regions. Over 43.4 per cent and 39 per cent of the funding from the World Health Organization (WHO), for example, went to Asia and the Pacific and Latin America and the Caribbean respectively, while 15 per cent went to Africa. The financial resources of the World Food Programme (WFP) were divided almost equally between Africa and Latin America and the Caribbean. The European Community, through its European Development Fund, directed 44 per cent and 21 per cent of its assistance to Asia and the Pacific and Latin America and the Caribbean respectively, while Africa and Europe shared almost equally the remaining 35 per cent of financial support.

2. Action taken by intergovernmental organizations

33. Assistance from intergovernmental organizations for 1991-92 totalled $416 million or 56 per cent of total multilateral assistance to small island developing States for the period. The area of transport and communications received the greater share of resources from intergovernmental organizations (28.4 per cent), followed by land resources (25.2 per cent) and human resource development (19 per cent). The African Development Bank's assistance supported activities in the areas of transport and communications and human resource

development. The activities financed by the Caribbean Development Bank were mainly in the area of natural and environmental disasters, while those of the Asian Development Bank were in the area of national institutions and administrative capacity. Assistance provided by the Asian Development Bank mainly took the form of grants either made directly to Governments of Asia and the Pacific or routed through the South Pacific Regional Environment Programme (SPREP) to enhance the environmental planning and management capabilities of the Pacific island countries. The Commonwealth Secretariat provided funding for activities in all of the substantive areas, with emphasis on human resource development, regional institutions and technical cooperation, and national institutions and administrative capacity, while the European Community supported activities mainly in the areas of land resources and transport and communications.

3. Action taken by non-governmental organizations

34. A number of non-governmental organizations (see list in annex II) reported that they were undertaking activities in sectoral areas that corresponded to the substantive areas of the draft programme of action. Most of the information received from those organizations, however, was qualitative rather than quantitative. The majority of the responses came from international non-governmental organizations that were involved in implementing activities mainly at the national level, although some programmes had a broader focus.

35. Of the non-governmental organizations that provided information, most had programmes that focused on the management of the coastal and marine environment and human resource development. Activities included the protection of marine areas, the protection of turtle populations, remote sensing for aquaculture, public awareness of environmental issues, and training programmes and workshops across the spectrum of issues pertaining to sustainable development. Other activities supported by non-governmental organizations included the maintenance of biodiversity, land and freshwater management, capacity-building at the national and regional levels, energy development and studies on climate change.

36. The World Wide Fund for Nature (WWF) reported activities in a number of small island countries, particularly in the Pacific. Their activities covered land, including biodiversity; coastal, marine and freshwater management; tourism; and national and regional capacity-building projects. Many of the sectoral projects supported by WWF, such as marine conservation and capacity-building, were regional in scope. Of particular relevance to small islands is the WWF transregional programme on coastal and marine pollution, which involved the creation of a marine conservation network aimed at improving the quality of current and future WWF coastal and marine conservation projects and promoting inter-organizational cooperation.

37. The Caribbean People's Development Agency focused on training programmes and fostering an awareness and understanding of development strategies in a number of Caribbean countries. Other non-governmental organizations with similar programmes included the Island Resources Foundation; South Pacific Action Committee for Human Ecology and Environment; International Union of Forestry Research Organizations; International Ocean Institute; and the World

Wide Fund for Nature. The International Association of Ports and Harbours supported activities concerning natural disaster prevention and preparedness.

38. The Foundation for International Environmental Law and Development is involved in global activities of direct relevance and benefit to the small island developing States. The organization has been working with the Alliance of Small Island States since 1989 to provide legal assistance on issues relating to the negotiation of a convention on climate change.

D. Review of donor activities by programme area

39. The present section of the report highlights the range and magnitude of activities undertaken by donors in small island developing States within the 14 programme areas of the draft programme of action. Since some organizations included information for 1993 in their submissions, partial information for that year is included here. More detailed information on those activities can be found in the inventory of donor projects accompanying the report (see para. 7 above).

1. Climate change and sealevel rise

40. Assistance in the area of climate change and sealevel rise was small, totalling $8.0 million, or 0.3 per cent of total assistance in all programme areas. Bilateral assistance centred on enhancing the monitoring capacity of small island developing States through, for example, the provision of monitoring stations and the strengthening of national meteorological services. In cooperation with various Pacific island countries, Australia has funded since 1990 an ongoing sealevel monitoring programme in the South Pacific, utilizing remote monitoring devices linked by satellite to its national tidal facility, at a cost of $5 million. In 1992, New Zealand provided in excess of $600,000 for similar purposes to Tuvalu, the Cook Islands, Kiribati and Fiji.

41. At the multilateral level, donor activities in the area can be divided into two broad sub-areas: those that concern monitoring and information exchange and those that concern various aspects of capacity-building. The largest programme, with a budget in excess of $1.6 million, was the World Weather Watch Programme of the World Meteorological Organization (WMO), which was being implemented in a number of countries, including Papua New Guinea, Seychelles, Maldives and Cape Verde. Another key project was the WMO Tropical Ocean/Global Atmosphere Programme, which involved the monitoring and study of the southern oscillation and El Niño phenomena. Funding for the programme was about $1 million in 1991-1992 with a further $500,000 allocated for 1993. The United Nations Educational, Scientific and Cultural Organization (UNESCO), through the Intergovernmental Oceanographic Commission (IOC), provided funding for the implementation of the Global Sea Level Observing System (GLOSS), which provides standardized sealevel data from a global network of 300 stations. Two global multilateral projects relevant to small island developing States which commenced in 1993 were the $1.5 million "climex" information exchange programme being sponsored by the United Nations Interim Secretariat of the Framework Convention on Climate Change and a $250,000 WMO-funded project designed to give users a computerized data-management capability for climate and other environmental data

(CLICOM). Other multilateral donors in the sector included the United Nations University (UNU) and the United Nations Environment Programme (UNEP).

2. Natural and environmental disasters

42. The programme area of natural and environmental disasters received $35.3 million, or 1.3 per cent of total donor resources. The two primary sub-areas of donor activity were disaster relief and rehabilitation, and disaster preparedness. In 1991-1992, bilateral disaster relief to small island developing States totalled in excess of $23 million, including a contribution of $10 million from the United States of America to Cyprus for emergency relief and one of $4.5 million from New Zealand to Samoa for cyclone relief and reconstruction following Cyclone Val. For the same period, disaster relief provided by the United Nations system totalled about $2.5 million and covered emergency food aid, the rehabilitation of the agriculture and forestry sectors, and reconstruction programmes. The largest multilateral donor was WFP, followed by the Food and Agriculture Organization of the United Nations (FAO) and the United Nations Development Programme (UNDP).

43. Disaster preparedness projects mainly operated at the regional and international levels. Of particular significance was the development and improvement of tropical cyclone advance warning systems through the application of satellite and computer technology, and the transfer of scientific knowledge. The principal United Nations multilateral donor was WMO, which provided about $1.3 million in assistance for the period 1991-1993, including approximately $1 million for the establishment of focal points for operational and research activities related to tropical cyclones and $255,000 for the upgrading of the tropical cyclone warning system in the south-west Indian Ocean. WMO was also involved in activities designed to strengthen the capacity of small island States to monitor the impacts of waves and storm surges.

44. As to intergovernmental organizations, the Caribbean Development Bank provided loan funding for the rehabilitation and improvement of sea defences in Dominica ($7.8 million) and for a consultancy in Barbados to develop proposals to improve storm-water drainage facilities ($285,000). The European Community financed projects in Fiji, Western Samoa and the Federated States of Micronesia.

3. Management of wastes

45. Assistance to small island developing States in the area of waste management amounted to $45.0 million, or 1.6 per cent of total resources. There were a limited number of bilaterally funded activities in the area over the period 1991-1992 and the largest single project, a sewerage development project in Saint Kitts and Nevis, was funded by Canada at a cost of about $370,000.

46. The activity of the United Nations system was largely at the national level and covered the development of infrastructure and facilities for waste collection; treatment and disposal; the development of waste monitoring and control mechanisms; and support for capacity-building measures, including institutional strengthening and human resource development. The largest single

donor was WHO, which provided over $25 million for multifaceted national and regional waste management projects, including about $6 million for landfill operations in south Pacific countries, $3.5 million for technical assistance to improve sewage disposal in the Caribbean and $1.5 million to support a range of waste-related activities in Africa, including public awareness and education campaigns. UNDP also supported a number of projects, including the development and implementation of a solid waste collection and disposal system in Maldives ($660,000) and a new technological system for processing waste in Papua New Guinea ($292,000). The International Maritime Organization (IMO) provided over $700,000 to support projects aimed at protecting the marine and coastal environment from pollution, including projects aimed at developing regional protection strategies. The World Bank provided about $12.6 million for a sewerage and drainage project in Cyprus and $2 million for infrastructural support for a housing project in Fiji. The African Development Bank provided $1.8 million to Seychelles in 1991 for the development of a programme for the treatment and disposal of waste water.

4. Coastal and marine resources

47. The total value of assistance allocated to the area of coastal and marine resources was $85.4 million, representing 3.1 per cent of total assistance in all programme areas. The assistance provided was broad in scope. Activities included assistance with the preparation of maritime areas legislation and the negotiation of equitable maritime boundary delimitation agreements (Maldives, Jamaica, Grenada, Dominica); the management of ocean resources, including integrated coastal zone and exclusive economic zone management; and fishery management, incorporating training, the conservation of biodiversity, marine pollution control and the development of infrastructure to support the fishery sector. A number of United Nations organizations were involved in supporting those activities, particularly the Economic Commission for Latin America and the Caribbean (ECLAC), the Economic and Social Commission for Asia and the Pacific (ESCAP), FAO and UNEP.

48. As to intergovernmental organizations, the Asian Development Bank funded a number of projects in the Pacific, including training on the protection of coastal environments. The Commonwealth Secretariat also supported a number of activities, primarily in the areas of exclusive economic zone management, maritime areas legislation and fishery legislation and management. Over the 1991-1992 period, the Commonwealth Secretariat allocated about $330,000 to support exclusive economic zone management in 14 small island developing States. The European Community also financed a number of projects in the Pacific (the Solomon Islands, Vanuatu and Kiribati) and in Barbados.

49. Of the bilateral donors, Japan and New Zealand were prominent: Japan supported activities related to fisheries development in numerous small island developing States (Cape Verde, the Marshall Islands, Kiribati, Maldives, Saint Vincent and the Grenadines, and Tuvalu), as well as activities related to marine reforestation (Papua New Guinea). Assistance from New Zealand supported fisheries development in the Pacific island countries and the establishment of marine training centres in Kiribati.

5. Freshwater resources

50. The value of assistance allocated by both bilateral and multilateral donors in the substantive area of freshwater resources was $110.5 million, or 4.0 per cent of total assistance to small island developing States in the 14 programme areas. The activities reported covered aspects of water supply treatment and distribution, water resource development, planning and management. Bilateral donors active in the field included Australia, Canada, New Zealand, France, Germany and the Netherlands, while beneficiaries included Solomon Islands, Dominica, Saint Lucia, Samoa, Vanuatu, Mauritius and Cape Verde.

51. At the multilateral level several United Nations organizations including WHO, FAO and the World Bank, as well as the European Community and the Commonwealth Secretariat supported projects similar in nature to those being funded bilaterally. Multilateral projects ranged in value from as little as a few thousand dollars for a water treatment project in Sao Tome and Principe to $164 million for a water resource programme in Cyprus funded by the World Bank. The Department for Development Support and Management Services of the United Nations Secretariat supported several projects dealing with the management of freshwater resources, particularly through the provision of technical assistance. WHO maintained projects in Cyprus, Malta, Bahrain and Maldives covering the development and management of water resources, as did the Pan American Health Organization in a number of Caribbean island countries.

6. Land resources

52. The land resources area received the third largest share of financial assistance from donors to small island developing States (18.9 per cent, or $522.6 million). The principal multilateral donors were FAO, WFP, UNEP, the World Bank and the European Community. Most of the projects undertaken by the United Nations system in the programme area comprised research and technical cooperation in support of agricultural development and land-use planning, including forestry, mining and institution-building. Budgets varied from $5,000 for a research project on Pacific island agroforestry conducted by UNU to $12.5 million for a World Bank-funded agricultural adjustment programme in Jamaica. FAO supported projects covering forest management in Papua New Guinea and Cape Verde, institutional strengthening for the agriculture sector in Tonga and agricultural planning in Trinidad and Tobago.

53. A number of bilateral donors were active in the area, including Canada, the United States of America, Japan, New Zealand, Netherlands, Australia, Finland, Germany and the United Kingdom of Great Britain and Northern Ireland. Australia financed rural development projects in Fiji, Papua New Guinea and Samoa, while Canada, the Netherlands and Japan supported similar projects in Jamaica. The United States of America financed an industrial diversification project in Mauritius and agricultural development projects in Jamaica and Cape Verde.

54. As to intergovernmental organizations, the Caribbean Development Bank (CDB) is working with FAO on the preparation of tropical forestry action plans for the eastern Caribbean, while the Commonwealth Secretariat financed land resource

activities in a number of countries, including Mauritius, Papua New Guinea, Solomon Islands, Saint Kitts and Nevis, Dominica, Grenada and Saint Lucia. Those activities covered a broad range of areas, including the development of mineral resources, agricultural mechanization, livestock management, infrastructure development and land rehabilitation. The European Community provided assistance to a number of countries including Jamaica, Dominica, Grenada, Vanuatu, Western Samoa, Solomon Islands and the Federated States of Micronesia.

7. Energy resources

55. The value of assistance allocated by multilateral and bilateral donors to energy resources was $184.9 million, or 6.7 per cent of total assistance to small island developing States. The activities undertaken in the area focused on two main sub-areas: energy development, including the expansion of services (electricity, oil, hydroplants, solar) and the strengthening of institutional capacity; and environmental mitigation. The majority of activities at the multilateral level were funded by UNDP with other donors being the European Community, the Commonwealth Secretariat, the African Development Bank and the World Bank, the latter funding the enlargement and installation of a hydropower plant in Dominica. Bilateral support was widespread. Japan and the United Kingdom of Great Britain and Northern Ireland financed two major oil refinery modernization projects in Trinidad and Tobago ($51.3 million). France, New Zealand, Australia and Canada financed several small-scale activities in Mauritius (thermal energy), Saint Vincent and the Grenadines (electrical distribution), Dominica (hydroelectric power) and Jamaica (energy conservation).

8. Tourism resources

56. The tourism resources programme area received a very small share of the financial assistance provided by multilateral and bilateral donors ($28.9 million, or 1.1 per cent of total assistance provided). Activities supported by donors included the strengthening of national planning capabilities for the development of tourism resources; improving the quality of tourism products; and upgrading tourism-related infrastructure and facilities. The United Nations multilateral organizations active in the area included UNESCO, which financed workshops on sociocultural aspects of tourism development in Samoa, Fiji and Niue, and UNEP, which had a regional subprogramme for the Caribbean on integrated planning and institutional development that aimed at the integration of eco-tourism into socio-economic programmes. In addition, UNDP supported the development of a tourism master plan for Vanuatu and the World Bank provided funds for airport improvements in Maldives. ECLAC and ESCAP also had subprogrammes that addressed the sustainable development of tourism. Japan co-sponsored a number of activities undertaken by ESCAP in the tourism field. The main bilateral donors to provide support for tourism development were the United Kingdom of Great Britain and Northern Ireland, New Zealand, the Netherlands and France.

57. Three intergovernmental organizations involved in the programme area were the World Tourism Organization (WTO), the Commonwealth Secretariat and the

European Community. The programmes sponsored by WTO were cross-sectoral in nature, with an emphasis on accommodating environmental concerns in tourism development to ensure sustainability and on developing quality support services. The Commonwealth Secretariat funded a number of advisers specialized in various specific aspects of tourism, including marketing, planning, training and statistics. The recipients of Commonwealth Secretariat support included Samoa, Cyprus and several Caribbean countries. The European Community also provided assistance to several island countries, with Grenada and Trinidad and Tobago being the recipients with the larger share of funding.

9. Biodiversity resources

58. Only $8.0 million, or 0.3 per cent of total assistance by bilateral and multilateral donors, was allocated to the programme area of biodiversity resources. Activities included establishing and strengthening institutional capacities to manage and conserve marine and land resources; developing management plans; creating public awareness programmes; conducting training and research; and strengthening the legal framework in support of conservation efforts. The Global Environment Facility (GEF), a joint UNDP/UNEP/World Bank programme, which has as one of its four components the conservation of biodiversity, is an important source of funds. An example of the type of activity funded under GEF is a five-year forest rehabilitation project in Mauritius that commenced in 1992. UNEP was also involved in implementing regional programmes on the conservation of biodiversity and the development of environmental management plans. FAO projects ranged from $81,000 for tropical floriculture in the Comoros to $900,000 for fruit tree development in Samoa over the period 1992-1994. UNESCO provided technical and financial support for biodiversity projects, which included a study of Caribbean medicinal plants ($16,000 for 1992) and, with financial assistance from Germany, a tropical rain forest conservation programme in Papua New Guinea ($220,000 for 1991-1992).

59. With regard to intergovernmental organizations, the European Community provided assistance to the island countries of Antigua, Barbados, Jamaica and the Solomon Islands. Other organizations involved in funding and implementing activities were the Commonwealth Secretariat, SPREP, the Caribbean Trust Fund and ECLAC.

10. National institutions and administrative capacity

60. Assistance to small island developing States in the substantive area of national institutions and administrative capacity amounted to $619.5 million, or 22.5 per cent of total resources, and correspondingly this area received the largest share of resources from bilateral donors. The assistance covered a wide range of sub-areas. At a broad level, the focus of activities was on strengthening national capacities in the economic and public administration sectors and on providing support for structural adjustment and debt refinancing programmes. In addition, support was provided for promoting industrial development as a means of creating employment opportunities; purchasing data-processing equipment; and providing services, including water and electricity, to public enterprises.

61. A number of bilateral donors made the area a priority. The United States of America was the highest contributor in supporting 49 per cent of resources in the area of national institutions and administrative capacity, which represents 51 per cent of its total assistance. Outstanding among the activities supported by the United States of America relate to economic development and support services in the Federated States of Micronesia and Marshall Islands ($72 million in each year of the biennium) and to administrative budget and education also in these two island States ($72 million). Another important recipient of assistance was Jamaica in the Latin America and the Caribbean area, having been assisted with approximately $27 million in various areas including support to balance of payments, financial and economic development services. Australia channelled about 34 per cent of its total assistance to small island developing States into the area, the bulk of those funds going to support public administration and government services. Support for structural adjustment programmes and balance-of-payments adjustments accounted for nearly all of the assistance provided by Japan and the Netherlands respectively, and 69 per cent of assistance from France. Germany directed 58 per cent of its total assistance to the rescheduling and refinancing of debt, while New Zealand directed 15 per cent of its assistance to supporting the national budgets of the Cook Islands, Niue and Tokelau.

62. At the multilateral level, approximately 4.8 per cent of disbursements by multilateral organizations covered activities relating to the programme area. The International Labour Office (ILO), the United Nations Centre for Human Settlements (Habitat), UNDP, UNESCO, the United Nations Industrial Development Organization (UNIDO), the World Bank, and the United Nations Secretariat were all involved in related activities in small island developing States, including the drafting and implementation of industrial property acts; the development of business skills; and support for small and medium-scale enterprises. Beneficiaries of that kind of assistance, provided mainly by UNIDO, World Bank, the World Intellectual Property Organization (WIPO) and the ILO, included Cyprus, Fiji, Papua New Guinea and Vanuatu.

63. Among the intergovernmental organizations, the European Development Fund assisted Cyprus (60 per cent of its assistance in this area), Malta, several countries in Asia and the Pacific (Kiribati, Papua New Guinea, Solomon Islands among others) and also Cape Verde and Sao Tome and Principe in Africa. The Commonwealth Secretariat provided support in several areas, ranging from debt record management to the elaboration of environmental management plans for the conduct of environmental impact assessments. Both the Asian Development Bank and the Caribbean Development Bank supported activities designed to improve national capacities for formulating and implementing environmental management strategies and conducting environmental assessments.

64. Activities supported at the regional and global level included the development and implementation of legislative instruments relating to economic performance and issues of environmental concern; management training relevant to the circumstances and problems faced by small island States; and studies on the special needs of small island developing States in the context of regional approaches to sustainable development. Those activities were supported by the Commonwealth Secretariat and ECLAC, among others.

11. Regional institutions and technical cooperation

65. Total funding to support regional institutions and technical cooperation was $64.9 million, representing 2.4 per cent of the total level of donor support for small island developing States. Bilateral donors provided about $55 million to support regional institutions in various areas and to strengthen the capacity of those institutions to serve their members. The Caribbean Community (CARICOM), for example, received approximately $10 million from Germany and Canada. Germany also provided assistance to the Organization of Eastern Caribbean States ($8 million) and funded programmes carried out by south Pacific regional institutions ($7 million). Australia, New Zealand and Japan provided $6 million in funding to the South Pacific Commission, and Australia and New Zealand provided about $4.2 million for the South Pacific Forum Secretariat, the South Pacific Regional Environment Programme and the South Pacific Geo-Science Commission.

66. While multilateral resources committed and disbursed in the substantive area represented only 1.3 per cent of total multilateral assistance, the activities conducted were wide-ranging. UNEP, in conjunction with SPREP, was establishing a pollution assessment and control programme in the south Pacific region. UNEP also promoted interregional collaboration among the East Asian, South East Pacific and South Pacific Regional Seas Programmes on issues concerning climate change, marine pollution, coastal management and the development of Global Resource Information Database (GRID) nodes. The UNEP regional service centres in the Caribbean, the South Pacific and Portuguese-speaking Africa offer facilities for the exchange of scientific and technical information on the environment.

67. The Department for Development Support and Management Services of the United Nations Secretariat provided support for the establishment of a regional mechanism for improving access to water and sanitation facilities in several Pacific island countries, including Kiribati, Federated States of Micronesia and Tuvalu. ESCAP focused on cross-sectoral issues relating to hazardous waste management, an area of concern to many Pacific island countries. UNDCP supported regional efforts to improve communication in the fight against drug trafficking, while IMO provided assistance with the legal aspects of maritime transport and measures for protecting the marine environment. The Commonwealth Secretariat was engaged in cooperative activities with the South Pacific Regional Environment Programme on capacity-strengthening in the areas of meteorology and finance; with the Eastern Caribbean Central Bank on debt management; and with the South Pacific Commission on the development of human resources.

12. Transport and communications

68. The transport and communications substantive area received the fourth highest amount of external assistance from both multilateral and bilateral donors (11.8 per cent or approximately $324 million). Bilateral donors contributed 54.5 per cent of that amount, the main donors being Australia, Canada, Finland, France, Germany, Japan, New Zealand, Sweden and the United

Kingdom of Great Britain and Northern Ireland. The focus of activities was evenly divided between the two sub-areas of transport and communications.

69. In terms of bilateral activities, Australia concentrated its assistance in the Pacific, and funded activities in both sub-areas, including airport construction and upgrading in Kiribati, Solomon Islands and Tonga, and improvements to telecommunication facilities in Tokelau, Vanuatu and Solomon Islands. Canada supported bridge reconstruction in Grenada and the upgrading of telecommunication facilities in Trinidad and Tobago. France financed the installation of Earth telecommunications stations in Cape Verde and a transportation project in Jamaica. Japan concentrated its support in the transport sector, with beneficiaries including Cape Verde, Kiribati, Papua New Guinea and Samoa.

70. A number of organizations of the United Nations system provided a broad range of assistance to small island developing States in both the transport and communications sub-areas. The International Civil Aviation Organization (ICAO) provided assistance with national aviation legislation and aviation training to Papua New Guinea, the Bahamas, Sao Tome and Principe, Trinidad and Tobago, Seychelles and Cuba. ICAO also provided training in airport emergency planning for several Pacific island countries. IMO financed a global training programme on the protection of the marine environment and the conduct of port inspections in accordance with relevant international agreements. UNESCO provided support for several Pacific island countries in the communications sector, particularly with television and video unit needs, the establishment of transmission points for frequency modulation (FM) radio coverage, the provision of printing press facilities, and the provision of equipment and training of personnel in newspaper computer operations. The Universal Postal Union (UPU) assisted several countries with the management and operation of postal services.

71. Four intergovernmental organizations, the African and Islamic Development Banks (IDB and ADB), the Commonwealth Secretariat and the European Community supported activities in the programme area. The ADB financed two large projects in Cape Verde, one on shipyard improvement and the other on the construction of the airport at Praia. IDB financed a port operations project in the Comoros, while the Commonwealth Secretariat financed projects in Jamaica, Dominica, Trinidad and Tobago, Maldives and Vanuatu. The European Community also financed projects in Jamaica, Antigua, Grenada, Kiribati, Fiji, Solomon Islands and the Federated States of Micronesia.

13. Science and technology

72. There were few activities funded by donors in the substantive area of science and technology; the level of assistance to the area amounted to only $10.5 million, or 0.4 per cent of total external assistance. The activities carried out were mainly financed by multilateral organizations, particularly FAO, WIPO, UNESCO, UNEP and UNDP, with an emphasis on providing training for policy makers and developing expertise in the assessment of environmentally sound technology. UNEP provided support for developing national integrated scientific and technical environmental information systems, and services to improve decision-making and strengthen existing institutions. WIPO has been

assisting a number of Pacific and Caribbean island countries and territories in matters relating to intellectual property rights, including Fiji, the Cook Islands, Barbados, Antigua and Barbuda, and Jamaica.

14. Human resource development

73. The substantive area of human resource development received overall the largest share of external assistance in the 1991-1992 period. Assistance to the programme area amounted to $709.9 million, or 25.7 per cent of total assistance for all programme areas. Bilateral donors provided $512.4 million, or approximately 25.4 per cent of total bilateral assistance, while multilateral donors provided $197.4 million, or 26.5 per cent of total multilateral assistance.

74. The Latin America and the Caribbean island countries received 57.1 per cent and the island countries in the Pacific received 29.3 per cent of assistance in the area of human resource development from bilateral donors. Although the African small island countries received only 7.8 per cent of bilateral assistance, they received 55.2 per cent ($85.3 million) of assistance from multilateral sources. The balance of the multilateral contribution was evenly divided between the Pacific and Caribbean island countries.

75. The activities carried out in the substantive area can be divided into three main sub-areas: education and training, including the provision of related infrastructure; health issues, including universal immunization, child care, nutrition, food aid and family planning; and activities for humanitarian assistance, community development and housing. Of the major bilateral donors, Australia provided 58 per cent of its support for the area to educational activities, New Zealand allocated 64 per cent, Japan 25 per cent and the United States of America 11 per cent. The United States of America provided about $70 million and Canada $22 million to Jamaica alone in food aid, humanitarian assistance and nutrition. Canada also assisted Haiti in this type of assistance with over $23 million. Austria, Japan, Switzerland and the Netherlands also contributed approximately $10 million in food aid over the 1991-1992 period. Japan provided $49 million by way of support for hospitals in Fiji, Papua New Guinea and Haiti and the United Kingdom of Great Britain and Northern Ireland provided $17 million for low-cost housing in Jamaica.

76. Multilateral organizations also provided support to the small island developing States in the three main sub-areas. The United Nations Population Fund, for example, provided over $2.3 million for a multidisciplinary technical assistance project in the Pacific and the World Bank allocated $11.5 million for education projects in the Bahamas and Maldives. WFP provided funding totalling approximately $29 million for humanitarian assistance and the provision of food to various countries, including Cape Verde, Cuba, Jamaica, Haiti and Mauritius.

III. CONCLUSIONS

77. The present report is based on information received from the international donor community on the level and allocation of its external assistance to small island developing States over the two-year period 1991-1992, just prior to UNCED, and therefore reflects the priorities, plans and programmes of both bilateral and multilateral donors, as well as the small island developing States themselves, that prevailed at that time. A reorientation of priorities in response to Agenda 21 and, more importantly, to the prospective outcomes of the Global Conference on the Sustainable Development of Small Island Developing States, will take some time. The present report is, nevertheless, timely inasmuch as it can assist the donor community and small island developing States to review current resource allocations in support of sustainable development and provide a firm basis for determining an effective future course of action (see table 13 for basic indicators of the small island developing States).

78. One major finding of the report is that the support of the donor community for sustainable development in small island developing States in 1991-1992 was concentrated in relatively few of the programme areas covered in the proposed programme of action. Bilateral assistance focused on five of those areas: national institutions and administrative capacity, human resource development, land resources and, to a lesser extent, transport and communications and energy resources. It should be noted that a significant proportion of the resources allocated to human resource development were directed to humanitarian assistance. Multilateral assistance was also weighted towards human resource development, other areas of emphasis being land resources, transport and communications, freshwater resources and the management of wastes. Another major finding is that there was little correlation between the per capita GDP of recipient countries and the per capita assistance they received. Such a correlation would be expected; its absence raises questions about the distribution of external assistance among those countries.

79. Looking to the future, the statistical analysis of the sectoral allocation of assistance indicates a need for greater emphasis to be placed on the areas identified as priority areas in the proposed programme of action but which have to date received less attention. In that connection, two considerations are worthy of note. First, the areas that have received the highest levels of support in the past represent capacity-building and infrastructural development and are therefore crucial for achieving the sustainable development of small island developing States. In spite of the greater emphasis placed on them in the past, much remains to be done in those areas, so that they will continue to call for greater emphasis. Second, while the data indicates that the other areas of the proposed programme of action received less emphasis, it will be necessary to reassess the needs of small island developing States in those other areas at the country level before deciding on the extent of funding needed. At any rate, any increased funding to those other areas should be provided on the basis of the principle of additionality, since a mere reallocation of funding might compromise national capacity-building and infrastructural development.

80. As to the allocation of donor assistance among countries, there is a clear need for greater equity based on needs. Since even those small island developing States that receive relatively more external assistance remain

constrained by resource limitations and will need more resources in the future to put their development on a sustainable footing, the pursuit of sustainable development will call for a general increase in the level of external assistance to small island developing States and at the same time will require that greater attention be paid to those States that have received relatively little support in the past. In order to ensure adequate resources for the sustainable development of small island developing States, there is a need to explore innovative approaches for financing sustainable development and, even more important, for strengthening the political will to support it.

81. The terms of reference for the present report did not include an assessment of current donor activities in support of sustainable development in small island developing States. Thus, the report does not attempt to examine either the efficiency of the supply of external assistance to those States or the efficiency of their utilization of that assistance. Nor does the report attempt to assess the effectiveness of the projects financed by external assistance. Regardless of whether ODA increases adequately in the future, efforts are needed to evaluate both the effectiveness and the cost effectiveness of projects and programmes, whether financed by external assistance or from domestic resources.

82. In order to ensure the efficiency and effectiveness of external assistance, action will be needed on the part of both small island developing States and the donor community. On the part of the small island developing States, efforts are called for at two levels. First, it will be necessary for recipient Governments to undertake a comprehensive reassessment of assistance needs through careful planning. Second, it will be necessary both to ensure that external assistance is designed to meet clearly identified priorities and perceived needs or to remove critical bottlenecks, as well as to ensure that all activities are closely monitored. On the part of the donor community, greater coordination among both bilateral and multilateral donors will help eliminate duplication of support wherever it exists. Finally, improved coordination between the donor community and the small island developing States will help to channel external assistance to the priority areas identified by recipient countries and will thus make for greater effectiveness.

Notes

1/ The 14 programme areas of the draft programme of action are: climate change and sealevel rise; natural and environmental disasters; management of wastes; coastal and marine resources; freshwater resources; land resources; energy resources; tourism resources; biodiversity resources; national institutions and administrative capacity; regional institutions and technical cooperation; transport and communications; science and technology; and human resource development.

2/ Report of the United Nations Conference on Environment and Development, Rio de Janeiro, 3-14 June 1992, vol. I, Resolutions Adopted by the Conference (United Nations publication, Sales No. E.93.I.8 and Corrigendum), resolution 1, annex II.

3/ Ibid., annex I.

4/ Australia, Austria, Canada, Denmark, Germany, Italy, the Netherlands and Switzerland.

5/ For total bilateral ODA to small island developing States, see table 14.

6/ For total multilateral ODA to small island developing States, see table 15.

Annex I

LIST OF SMALL ISLAND DEVELOPING STATES AND TERRITORIES COVERED IN THE REPORT

Europe

Cyprus
Malta

Africa

Cape Verde
Comoros
Mauritius
Sao Tome and Principe
Seychelles

Asia and the Pacific

Cook Islands
Micronesia (Federated States of)
Fiji
Kiribati
Maldives
Marshall Islands
Nauru
Niue
Papua New Guinea
Samoa
Singapore
Solomon Islands
Tokelau
Tonga
Trust Territory of the Pacific Islands/Palau
Tuvalu
Vanuatu

Western Asia

Bahrain

Latin America and the Caribbean

Antigua and Barbuda
Aruba
Bahamas
Barbados
Cuba
Dominica
Dominican Republic

Grenada
Haiti
Jamaica
Netherlands Antilles
Saint Kitts and Nevis
Saint Lucia
Saint Vincent and the Grenadines
Trinidad and Tobago
United States Virgin Islands

Annex II

LIST OF ORGANIZATIONS AND DONOR COUNTRIES WHICH PROVIDED INFORMATION FOR THE PREPARATION OF THE REPORT

United Nations

Department for Development Support and Management Services (DDSMS)
